Visual Evidence

One observed moment

Image evidence prompt

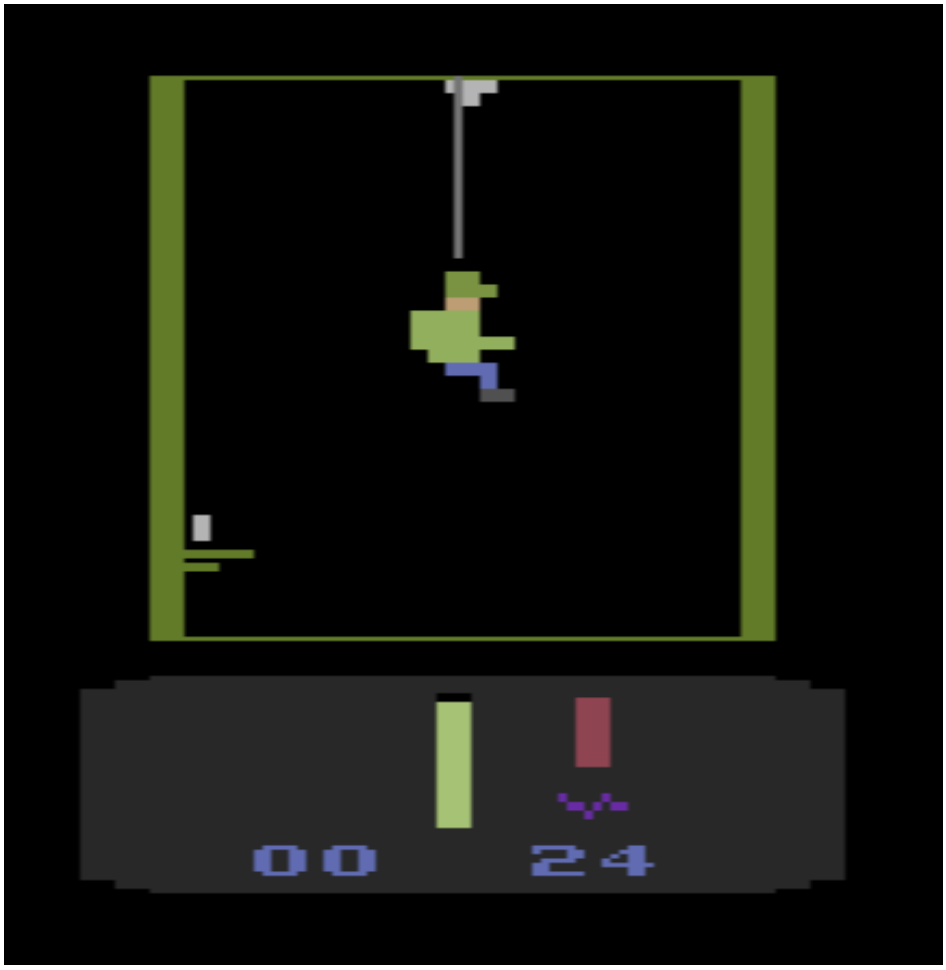

Submit one original screenshot or still of your Case Study 1 Atari game. Caption it with the title, version or platform when known, the scene shown, and its source. A relevant image from your first case study may be reused.

Requirements and potential deductions

- The image shows the original scene used for this redesign. (up to -0.5 points)
- The caption identifies the selected Atari game, scene, and image source. (up to -0.5 points)

Warning at submission: expected-items

Caption: This is when the game start and the beginning of the game the "underground"

Caption: THE HAND

Caption: pitchfork

Visual Redesign

Improvement goal

Response prompt

Identify one visual problem in the original scene and explain the mood or player experience your redesign should support. Refer to a specific detail in the original image.

Requirements and potential deductions

- Identifies a visual problem using a specific detail from the original scene. (up to -0.75 points)
- Explains the intended mood or player experience of the redesign. (up to -0.75 points)

Submitted response

The most important change that should be done is the color of the underground as the green make it seem like this isn't neces underground but just about some weird barn or scaffolding it doesn't really set the mood of braving down a spooky undergroun corridor it just feels like there is not really a mood set it is mostly confusion from me as if it wasn't for reading the manual or the cover of the game cover then i would never be able to tell what it would have been.

Revised palette

Response prompt

List your proposed colors and their roles, including any neutrals. Explain why this palette size and a named color relationship suit your improvement goal, and how contrast makes an important element stand out. Color names or swatches are sufficient; exact color codes are optional.

Requirements and potential deductions

- Identifies the proposed colors and what each is used for. (up to -0.5 points)
- Justifies the palette size and a named color relationship using the improvement goal. (up to -0.75 points)
- Explains a contrast choice that makes an important element stand out. (up to -0.75 points)

Submitted response

I would primarily change the green corridor to a more grayish blue then would change the pitchforks (<-- I forget there names) more washout desaturated green and i would at least make THE HAND a little brighter so it catches the players attention bette

Redesigned scene

Image evidence prompt

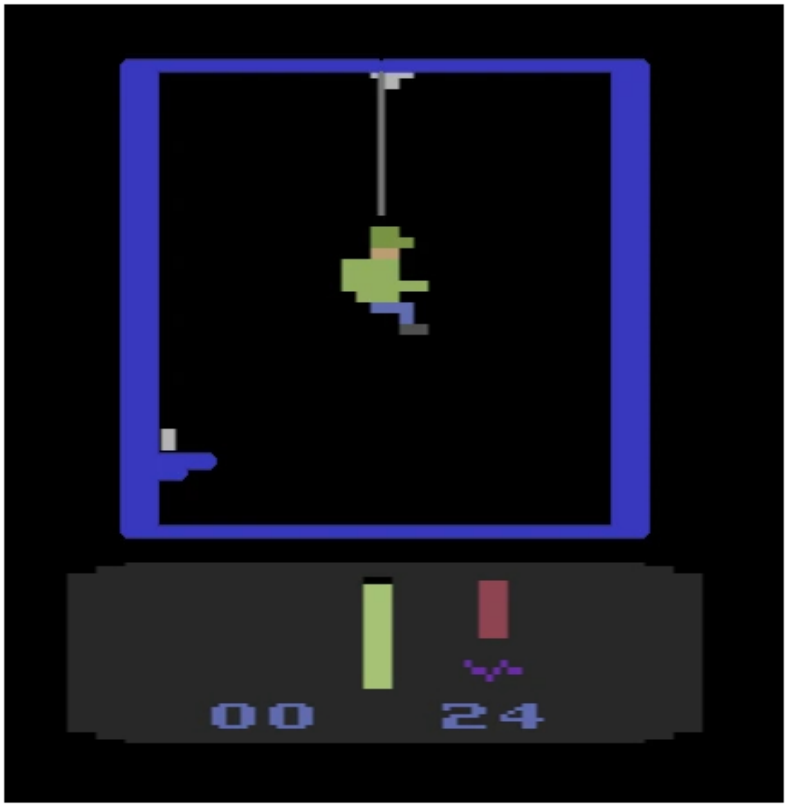

Submit a colored sketch, annotated recoloring, or mockup of the same scene using your proposed palette. Include a gameplay element and an interface or state indicator. Keep an important state understandable without color alone, using a label, shape, or icon. Caption the image to identify the scene and your changes.

Requirements and potential deductions

- The redesign applies the proposed palette to the same scene's gameplay element and interface or state indicator. (up to -1.25 points)
- An important state has an understandable label, shape, or icon in addition to its color. (up to -1.25 points)

Warning at submission: expected-items

Caption: Blue walls

Caption: THE HAND but brighter slightly

Caption: pitchfork?

Look and feel decision

Response prompt

Explain one visual change beyond the palette, such as composition, interface layout, character shape, or an animation you would add. Connect it to a relevant Chapter 6 concept from vision, interface, ambience, or storytelling and explain its intended effect on the player. Describe motion in words if your sketch cannot show it.

Requirements and potential deductions

- Connects a specific visual change beyond the palette to a relevant Chapter 6 concept. (up to -0.75 points)
- Explains how that change would affect the player's experience. (up to -0.75 points)

Submitted response

the bars at the bottom of the of the screen should be made more clear as to what they are and how it depletes, this would mak
better and more manageable and clear to the player as to what they are doing like an outline of the pieces for the machine and

Evaluate the redesign

Response prompt

Compare your redesign with the original scene. Explain how the revised visuals work together to address your improvement goal while keeping the game's core actions and rules. Refer to a specific difference visible in the two images.

Requirements and potential deductions

- Evaluates the combined effect of the revised visuals on the improvement goal using a specific before-and-after difference. (up to -0.75 points)
- Explains how the original core actions and rules remain intact. (up to -0.75 points)

Submitted response

It makes the player character and the background more distinguishable and also more clear what the enemies are and what ca
seen as the goal cause when i first played it I got lost ding anything and could tell anything apart but with the green and the cor
of the blue makes it more eye catching and the pitch fork (slimy hand) and THE HAND (sawing monster) don't blend in with wh
ghost is and make it obvious that they are different entities that do different things
